Adaptive Filtering Algorithms And Practical

He first introduces the main classes of adaptive filtering algorithms in a unified framework, using clear notations that facilitate actual implementation. Algorithms are described in tables, which are detailed enough to allow the reader to verify the covered concepts. Examples address up-to-date problems drawn from actual applications.

Adaptive Filter Features Adaptive filters are composed of three basic modules: Filtering structure Determines the output of the filter given its input samples Its weights are periodically adjusted by the adaptive algorithm Can be linear or nonlinear, depending on the application Linear filters can be FIR or IIR Performance criterion Defined according to application and mathematical tractability

Adaptive Filtering - Theory and Applications

practical adaptive filtering, smart reflections inspired on them led to practical algorithms such as the least-mean-square (LMS) [4]-[5] and Newton-based algorithms. The Newton and steepest-descent algorithms are introduced in this chapter, whereas the LMS algorithm is treated in the next chapter.

Adaptive Filtering | SpringerLink

An adaptive filter is a system with a linear filter that has a transfer function controlled by variable parameters and a means to adjust those parameters according to an optimization algorithm. Because of the complexity of the optimization algorithms, almost all adaptive filters are digital filters. Adaptive filters are required for some applications because some parameters of the desired ...
