Particular interest is given to the setting up of the Journal of Neo-Tropical Wildlife and its literature collection. The Neo tropics contain about 33% of the world's animal diversity (Ojasti), and no wildlife and conservation journal exists that focuses on this area; although there was one initiative aimed at correcting this called Manejo de Fauna Silvestre en Latinoamerica.

Also, while animal production and productivity decreased, animal mortality drastically increased. The "conclusions" of this book were written some 2-3 years after the main chapters. This was a fortuitous accident because the new economic situation left the author more convinced than ever of the need to develop a simple and farmer-friendly pig production system for the island.

Global demand for livestock products is expected to double by 2050, mainly due to improvement in the worldwide standard of living. Meanwhile, climate change is a threat to livestock production because of the impact on quality of feed crop and forage, water availability, animal and milk production, livestock diseases, animal reproduction, and biodiversity.

Climate change and livestock: Impacts, adaptation, and ...

The demand for animal products (e.g. dairy and beef) in tropical regions is expected to increase in parallel with the public demand for sustainable practices, due to factors such as population growth and climate change. The necessity to increase animal production output must be achieved with better management and production technologies.
