John Tukey Exploratory Data Analysis

Tukey's methods speak for themselves through the gains in insight they provide, so he is content to show *how* to do them and to provide copious examples. What he does not do is supply the mathematical theory. If you like, you can read about that in Hoaglin, Mosteller, and Tukey's "Understanding Robust and Exploratory Data Analysis".

Tukey provides a unique view to exploratory data analysis that to my knowledge has been lost. He provides a literal hands on approach to the topic of data analysis. In my opinion it is still a great read even though his methods of analysis are a bit dated.

John W. Tukey The approach in this introductory book is that of informal study of the data. Methods range from plotting picture-drawing techniques to rather elaborate numerical summaries. Several of the methods are the original creations of the author, and all can be carried out either with pencil or aided by hand-held calculator.

Exploratory Data Analysis (EDA) John Tukey has developed a set of procedures collectively known as EDA. Two of these procedures that are especially useful for producing initial displays of data are: 1. the Stem-and-Leaf Display, and 2. the Box-and-Whiskers Plot. To illustrate EDA, consider the following set of pulse rates from 96 people:

EXPLORATORY DATA ANALYSIS (EDA)

John W. Tukey wrote the book Exploratory Data Analysis in 1977. Tukey held that too much emphasis in statistics was placed on statistical hypothesis testing (confirmatory data analysis); more emphasis needed to be placed on using data to suggest hypotheses to test.

Exploratory data analysis - Wikipedia

John Tukey introduced the box and whiskers plot as part of his toolkit for exploratory data analysis (Tukey, 1970), but it did not become widely known until formal publication (Tukey, 1977). The boxplot is a compact distributional summary, displaying less detail than a histogram or kernel density, but also taking up less space.
