A continuous thread of content broken up into newspaper-style columns. A single row of items arranged as columns, with all heights being equal. Multiple rows of columns lined up by row and column. The recipes. You need to choose different layout methods in order to achieve your requirements. A continuous thread of content — multi-column layout

Column layouts - CSS: Cascading Style Sheets | MDN

Formal syntax auto | fixed Examples Fixed-width tables with text-overflow. This example uses a fixed table layout, combined with the width property, to restrict the table's width. The text-overflow property is used to apply an ellipsis to words that are too long to fit. If the table layout were auto, the table would grow to accomodate its contents, despite the specified width.

table-layout - CSS: Cascading Style Sheets | MDN

Guide to Cascading Style Sheets - HTMLHelp

You need only outline the changes. The word cascade in Cascading Style Sheets means your styles are passed along (inherited) by style sheets that get their instructions from your original preferences — in this case, those you set up in the class. Basically, when you set up a style, any element that gets assigned that style “cascades through” to the other styles, as directed by your settings, unless you apply a change.

How Cascading Style Sheets (CSS) Work - dummies

Cascading Style Sheets (CSS) is used to format the layout of a webpage. With CSS, you can control the color, font, the size of text, the spacing between elements, how elements are positioned and laid out, what background images or background colors to be used, different displays for different devices and screen sizes, and much more!
