MPLS is a standard and supported by most of the networking vendors including Cisco. If you are new to MPLS implementation in Cisco IOS router, first you have to be familiar with the MPLS terminology used by Cisco. Read on to find out more information that will help you Understanding How MPLS Works in Cisco IOS Router.

Understanding How MPLS Works in Cisco IOS Router

- MPLS packets can run on other layer 2 technologies such as ATM, FR, PPP, POS, Ethernet
- Other layer 2 technologies can be run over an MPLS network
- Labels can be used as designators For example—IP prefixes, ATM VC, or a bandwidth guaranteed path
- MPLS is a technology for delivery of IP Services

Multiprotocol Label Switching (MPLS) is a high-performance method for forwarding packets through a network. MPLS enables routers at the edge of a network to apply simple labels to packets. This practice allows the edge devices - ATM switches or existing routers in the center of the service provider core to switch packets according to labels ...
