Tables Of Generalized Airy Functions

Publisher Summary. This chapter presents tables that contain the numerical values of special functions that are called generalized Airy functions and denoted by $e_n(t)$, $n(t)$. The values of the first derivatives of these functions are also given.

In the physical sciences, the Airy function (or Airy function of the first kind) $A_i(x)$ is a special function named after the British astronomer George Biddell Airy (1801-1892). The function $A_i(x)$ and the related function $B_i(x)$, are linearly independent solutions to the differential equation— =, known as the Airy equation or the Stokes equation.

On the Distribution of the Zeros of Generalized Airy Functions

In the present paper, we have made a detailed study of the generalized Airy functions, which have found wide applications in the field of wave propagation and hydrodynamic stability. A series of tables and graphs are provided for the above functions with complex variables. The results are proved satisfactory.
